

### **March 31 – Steering Committee Meeting**

The meeting started with Vimalachandran providing a tour of the Second Student Centre facility at York University including a review of programming spaces, process of construction and design.

The committee discussed refined the specific scope of work into two main pieces of work: 1) feasibility and 2) funding model. The feasibility work would look to determine the project description, potential site location, general programming requirements, project rationale and governance model. The funding model work would determine viable options to secure government and community commitments for funding the community centre. To get this work started, the committee divided responsibilities among each other.

The committee reviewed a sample online consultation tool. Revisions were recommended to be updated for the next meeting.

The committee confirmed the meeting date with MP Gary Anandasangaree and prioritized other elected officials to reach out to for meetings.
